By this change, we have set the additional assembling point for the plastic gasket-attached oil pan type. The seal type of the oil pan is identifiable by the paint mark in the oil pan side as follows :

- The plastic gasket-attached oil pan type : Paint of the number
- The liquid gasket-attached oil pan type : Paint of the alphabet

Also, at the time when you change it for the plastic gasket-attached oil pan type, you have to change the exclusive bolt as well as oil pan gasket at the same time.(pairwise) In addition, the exclusive bolt is unreusable for a seal bolt again, and the clamping torque is different from the conventional type, too. Please follow the torque as below :

The clamping torque : 7.9±1.0 N・m
